

Relating your test scores to the national standard:

National Test indicator tables 2022

The study: New PUMA Year 6

The results in this report are from the study carried out in 2021–22 to correlate New PiRA/PUMA and NTS Assessment test scores with National Test Scaled Scores.

National test indicator tables and scatterplots / linear regression graphs

Teachers may wish to correlate test marks with a particular Scaled Score. These are supplied in the tables below. The Relationship Tables have been created to enable you to monitor the marks children are likely to need in their New PUMA and PIRA tests in order to achieve a scaled score of 100 or above when they sit their national tests.

In each of the tables, the first column gives the raw score gained on the test. The middle column shows you the pupil's **estimated Scaled Score**. The numbers on either side of this middle column show the upper and lower 95% confidence intervals (CI) for the estimated Scaled Score. The columns in italics show the outlier range, which individual pupils could demonstrate (these show the bounds within which the majority of children will be scoring. However, like in any predicted relationship, although most children will be close to the estimated Scaled Score, i.e. within this 95% outlier range, children do at times vary quite widely).

**Please note that the tables are indicative only. Other factors can influence a child's performance on any given day. Predictions must be taken with some caution. The tables below were obtained using statistical correlation and regression of the test marks and the results the children obtained in the 2022 National Tests. As with all statistical methods, there are errors of measurement, and so the tables show the 95% confidence interval for the estimated scaled score, and the 95% prediction interval (outlier range) for the regression analysis.*

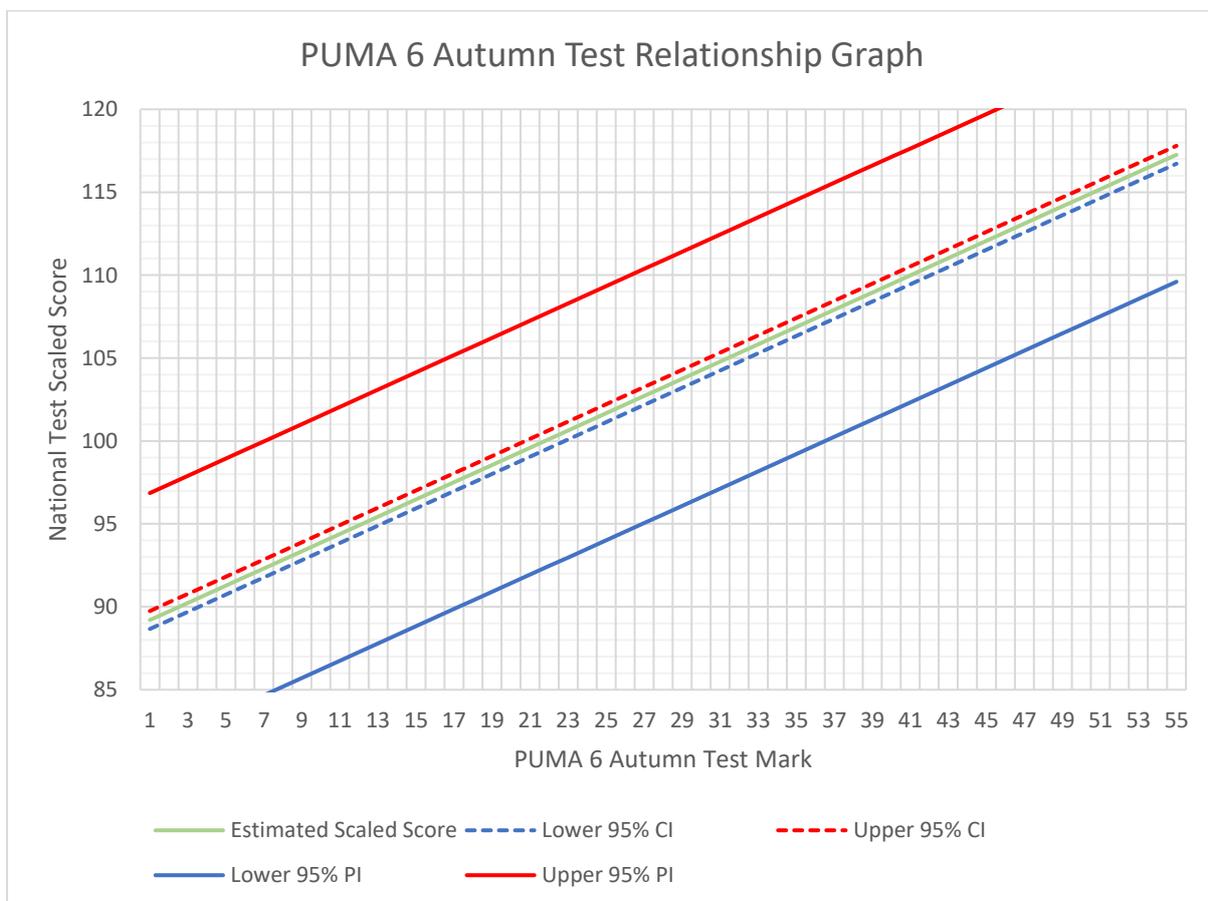

New PUMA Year 6 Autumn

National Test indicator table

| New PUMA Autumn Y6 test mark | <i>Outlier range</i> | Lower 95% Confidence limit (CI) of the mean | Estimated KS2 Scaled Score | Upper 95% Confidence limit (CI) of the mean | <i>Outlier range</i> |
|------------------------------|----------------------|---|----------------------------|---|----------------------|
| 1 | 82 | 89 | 89 | 90 | 97 |
| 2 | 82 | 89 | 90 | 90 | 97 |
| 3 | 83 | 90 | 90 | 91 | 98 |
